

HTML Newspaper Code Structure Overview

1. Document Setup

- <!DOCTYPE html> declares the document type.
- <html lang="ur"> sets the document language.
- <meta charset="UTF-8"> ensures proper character rendering.
- <title> sets the page title.
- <body> includes direction:rtl and Urdu font settings.

2. Container

- Main container div has width 1000px, centered with margin:auto.
- Background is white with solid black border and padding.

3. Top Section (Header)

- Flexbox divides top into Left Banner and Right Header.
- Left Banner: background image with dark overlay and bold headline text.
- Right Header: circular label, main headline, subheadline box.

4. Middle Newspaper Section

- Flex container with five columns:
 1. Left Image Column: image and description.
 2. Columns 1, 2, 3: news content.
 3. Right Side Box: highlighted special news.
- Columns separated by borders with padding for spacing.

5. Design Considerations

- Flex-wrap allows responsive wrapping on smaller screens.
- Box-sizing: border-box ensures correct width calculation.
- Overlay improves text readability.
- Borders and padding create newspaper-style layout.

6. Styling

- Inline CSS used for self-contained design.
- Font sizes and boldness maintain headline hierarchy.
- Images set to width 100 percent for full column coverage.
